- Use correct scientific terminology to demonstrate understanding.

Common Mistakes to Avoid

- Making assumptions without evidence from the sample.
- Confusing similar structures or tests.
- Overlooking subtle color changes or features.
- Failing to explain the significance of observations.

Sample Questions and Model Answers

Sample Question 1: Biochemical Test for Starch

Question: A sample of plant tissue was tested with iodine solution. The solution turned blue-black. What does this indicate?

Model Answer: The blue-black coloration indicates the presence of starch in the plant tissue. Iodine reacts with starch to produce this characteristic color, confirming that starch is stored in this sample.

Sample Question 2: Identifying Cell Types

Question: Under the microscope, a cell shows a large central vacuole, chloroplasts, and a cell wall. Which type of plant cell is this most likely to be?

Model Answer: These features suggest that the cell is a plant cell, specifically a palisade mesophyll cell, as it contains chloroplasts for photosynthesis, a large vacuole for storage, and a cellulose cell wall for structural support.
