What is a Network?

At its simplest, a network is a collection of interconnected devices that share data and resources. This connectivity enables communication, collaboration, and resource sharing across geographically

dispersed locations.

Types of Networks

Networks can be classified based on their size, scope, and purpose:

- **LAN (Local Area Network):** Typically confined to a single building or campus, providing high-speed connectivity among devices.
- **WAN (Wide Area Network):** Spans large geographical areas, often interconnected via public or private networks.
- **MAN (Metropolitan Area Network):** Covers a city or campus-sized region, bridging LANs.
- **PAN (Personal Area Network):** Connects personal devices over short distances, such as Bluetooth connections.

Network Topologies

The physical or logical arrangement of network devices impacts performance and scalability:

- **Star:** All devices connect to a central hub or switch.
- **Bus:** Devices share a common communication line.
- **Ring:** Each device connects to exactly two others, forming a circle.
- **Mesh:** Devices connect directly to multiple other devices for redundancy.
- **Hybrid:** Combines two or more topologies for flexibility.

Network Devices and Components

An understanding of key hardware components is vital for designing and maintaining networks.

Essential Network Devices

Switches
