Common Pitfalls and How to Avoid Them

| Pitfall | How to Avoid |

|---|---|

| Misreading data or question | Read questions carefully, underline key parts. |

| Omitting units | Always include units in calculations and final answers. |

| Not showing working | Write down all steps? partial marks are awarded for method. |

| Vague explanations | Be specific; reference scientific principles explicitly. |

| Rounding errors | Follow the instructions on rounding, and keep consistent significant figures. |

Example Walkthrough: Analyzing a Typical 1c Question

Suppose a question provides a table with the mass of reactants and products in a chemical reaction and asks for the percentage yield and an explanation of why it's less than 100%.

Step 1: Extract data from the table.

Step 2: Calculate theoretical yield using stoichiometry.

Step 3: Use the actual yield to determine percentage yield:

$$\text{Percentage yield} = (\text{Actual yield} / \text{Theoretical yield}) \times 100$$

Step 4: Write a clear explanation, such as:

?The percentage yield is less than 100% because some reactant was lost during transfer, or side reactions occurred, reducing the amount of product formed.?

Marking scheme considerations:

- Correct calculation of theoretical and actual yields.
- Accurate percentage calculation.
- Clear, scientifically supported explanation.
